DETAILED ACTION

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in INDIA on 12/24/2002. It is noted, however, that applicant has not filed a certified copy of the 1296/DEL/02 application as required by 35 U.S.C. 119(b).

Claim Objections

1. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 8, 8-17 have been renumbered 8, 9-18.

2. Claims 8, 8, and 9 (renumbered 8, 9, and 10) are objected to because of the following informalities:

In claim 8, the examiner suggests to change "the transmission channel" in step (b) to "a transmission channel."

In claim 8 (renumbered 9), the examiner suggests to change "the method according to claim 7" on line 1 to "the method according to claim 8."

In claim 9 (renumbered 10), the examiner suggests to change "the method according to claim 7" on line 1 to "the method according to claim 8."

Art Unit: 2611

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 10 (renumbered claim 11) is rejected under 112, 1st paragraph as being a single means claim with undue breadth. The means recitation does not appear in combination with another recited element of means. See MPEP § 2164.08(a).

Claims 12-18 are rejected as incorporating the deficiencies of claim 11 upon which they depend.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: modulating and encoding data bits/samples.

Application/Control Number: 10/743,690 Page 4

Art Unit: 2611

6. Claim 2, 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation "the forward and conjugate pulses" in lines 1-2.

There is insufficient antecedent basis for this limitation in the claim.

Claim 8 recites "the input digital data bits/samples" in step (a). There is insufficient antecedent basis for this limitation in the claim.

Claims 3-7 and 8-10 (renumbered 9-11) are rejected as incorporating the deficiencies of claims 1 and 8 upon which they depend.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 1 and 10 (renumbered 11) are rejected under 35 U.S.C. 102(b) as being anticipated by Mohan et al. (WO 02/096052).
 - (1) with regard to claim 1:

As shown in figure 1, Mohan discloses a communication system, comprising:

- (a) a digital data input source (data input in figure 1);
- (b) a modulator (data modulation in figure 1);

Application/Control Number: 10/743,690 Page 5

Art Unit: 2611

(c) an encoder (118 in figure 1);

(d) a decoder (124 in figure 1);

(e) a demodulator (page 21, lines 3-4); and

(f) a data transmission link (114 in figure 1);

wherein the communication system transmits mass quantities of digital data through the data transmission link at high-rates of speed by way of modulating and encoding the data bits/samples (page 21, lines 9-19).

(3) with regard to claim 10 (renumbered claim 11):

Mohan discloses a means for transmitting mass quantities of digital data through a data transmission link at high-rates of speed by way of modulating and encoding the data bits/samples (see figure 1).

(4) with regard to claims 2 and 12:

Mohan further teaches the forward and conjugate pulses are generated by a mono-shot pulse generator (page 20, lines 23-24).

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/743,690

Art Unit: 2611

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 6

- 10. Claims 3 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mohan et al. (WO 02/096052) in view of Hartmann et al. (US 2003/0145036).
 - (1) with regard to claims 3 and 13:

Mohan discloses all of the above subject matters except for splitting the input digital data bits into a plurality of data bit sets. However, splitting the input digital data into a plurality of data sets is well known in the art as it is evident by Hartmann et al. (page 4, paragraph [0046]). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teaching of Hartmann to the teaching of Mohan in order to provide significant improvement in efficiency of modulation process in the communication system.

(2) with regard to claim 8:

As shown in figure 1, Mohan discloses a method for transmitting mass quantities of digital data through a data transmission link at high-rates of speed in a communication system including:

- (b) encoding forward and conjugate pulse position over the transmission channel (118 in figure 1);
- (c) decoding the pulsed data to discriminate between the forward and conjugate pulses in a signal (124 in figure 1); and

Art Unit: 2611

(d) demodulating the data to recombine the forward and conjugate pulses into a desired digital output (page 21, lines 3-4).

Mohan et al. disclose all of the above subject matters except for splitting the input digital data bits into a plurality of data bit sets. However, splitting the input digital data into a plurality of data sets is well known in the art as it is evident by Hartmann et al. (page 4, paragraph [0046]). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teaching of Hartmann to the teaching of Mohan in order to provide significant improvement in efficiency of modulation process in the communication system.

(4) with regard to claim 8 (renumbered claim 9):

Mohan further teaches the forward and conjugate pulses are generated by a mono-shot pulse generator (page 20, lines 23-24).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julia P. Tu whose telephone number is 571-270-1087. The examiner can normally be reached on 7:30 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chieh M. Fan can be reached on 571-272-3042. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
